Need help with your FCC application? Need frequency coordination?

MRFAC, Inc. -- an FCC-certified coordinator for private land mobile radio frequencies -- is here to help you!

Personal service. Quick turn-around. Reasonable rates. A WINNING COMBINATION!

MRFAC Licensing Services

MRFAC performs a wide range of frequency coordination and licensing services for industrial radio users. In addition to frequency coordination, MRFAC's services include:

- Contour analysis (including impact of new applications on existing radio systems)
- Form 601 preparation, and Schedule K (required notification) filing
- Co- and adjacent-channel analyses for 72, 150, 450, 800, and 900 MHz systems
- Preparation of FCC Registration (CORES) filings
- Assistance with short-spacing consent letters

MRFAC Advocacy

MRFAC also represents manufacturers and other industrial radio users before the Federal Communications Commission (FCC) and on Capitol Hill. MRFAC's advocacy efforts are aided by Washington counsel and often undertaken in concert with The National Association of Manufacturers. A few examples include:

- The successful initiative for designation of additional crane control frequencies
- The successful defense of 900 MHz frequencies for industrial users against threat of auctions
- The preservation of co-equal access for manufacturers to UHF channels shared with other industries
- The successful advocacy efforts on behalf of business and industrial radio users in the 800 MHz rebanding proceeding
- Opposition to the Federal Aviation Administration's proposal for a sweeping expansion of antenna structure registration requirements

MRFAC History

MRFAC, Inc., formerly known as the Manufacturers Radio Frequency Advisory Committee, traces its origins to 1954 when it was an arm of the National Association of Manufacturers (NAM). For the past 31 years, MRFAC has operated independently, while retaining its close ties to NAM on business and industrial spectrum policy matters.
